

JOB TITLE

Full-Stack Software Developer

Job Description

We are looking for a software developer to join our growing team to help us build next generation marketing platforms for the social and search channels. The ideal candidate is self-motivated and interested in doing quality work in a dynamic and collaborative environment. Flexibility, a drive to have an impact, a knack for solving tough engineering problems, and the ability to collaborate and communicate effectively are keys to success in this position. If you like to develop cloud services, process large volumes of data, and work on optimization algorithms, then you will enjoy working with us.

Qool Media specializes in creating rich, engaging content and building thriving online communities. Our destination websites inform and entertain audiences who reach us through social, search, and content marketing channels.

ROLE RESPONSIBILITIES

- Interact with product managers and end users to deliver an end to end experience with quality.
- Maintain and improve upon our platforms currently coded using .NET, MSSQL, and Angular JS utilizing many different technologies such as WCF, MVC, Memcached and .Net Core.
- Build out new features and systems using technologies you think are best suited for the job.
- Have end to end ownership of systems and services. You will design, develop, and launch services. You will have a thorough understanding of the entire system.

QUALIFICATIONS

- A BS in CS or a similar analytical discipline or equivalent experience, and at least 4 years of experience shipping code and deploying services.
- Strong understanding of object-oriented programming and related principles and service-oriented architectures.
- Applicable experience with at least a couple of the following programming languages: C#, JavaScript and SQL. Experience with .NET Core and Angular is a bonus.
- Familiarity with Agile Methodologies, domain driven design and TDD experience a plus.
