

Senior Software Engineer

DESCRIPTION

Qool Media is looking for a software engineer to help us build next generation marketing platforms for the social and search channels. We work like a startup but have the revenues and profits of an established company and we are growing rapidly. If you like to develop with cloud services, process large volumes of data or work on optimization algorithms, then you will enjoy working with us. Individuals should be self-motivated and interested in doing quality work in a dynamic and collaborative environment. As a software engineer, you will interact with product managers and end users to deliver an end to end experience with quality. We use .NET, MSSQL, Angular JS, and many AWS services. Flexibility, a drive to have an impact, solve tough engineering problems, and the ability to collaborate & communicate effectively are keys to success in this position.

QUALIFICATIONS

- A BS in CS or a similar analytical discipline or equivalent experience, and at least 4 years of experience shipping code and deploying services.
- Strong understanding of object oriented programming & related principles, and service oriented architectures.
- Applicable experience with at least couple of the following programming languages: C#, PHP, JavaScript and SQL. Experience with .NET Core and Angular2 is a plus
- Familiarity with AWS services and DBMS is a plus.
- Bonus points for domain driven design and unit testing experience

RESPONSIBILITIES

- Have end to end ownership for systems and services. You will design, develop, and launch services. You will have a thorough understanding of the overall system.
- Document scenarios, debug, evaluate, and test services.
- Own the implementation of key features or sub-components.
- Lead the implementation of good software engineering practices.
